                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 16,

Publication No. US20040146884A1
GENERAL INFORMATION:
APPLICANT: Demmer, Jeroen
APPLICANT: Shenk, Michael Andrew
APPLICANT: Hall, Claire
APPLICANT: Fish, Steven A
TITLE OF INVENTION: Antifreeze proteins isolated from forage
TITLE OF INVENTION: grasses and methods for their use.
FILE REFERENCE: 11000.1070U

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 80, Application US/09228986

Patent No. 6159198

GENERAL INFORMATION:
APPLICANT: Strabala, Timothy
APPLICANT: Nieuwenhuizen, Niels
TITLE OF INVENTION: Compositions Isolated from Plant Cells
TITLE OF INVENTION: and Their Use in the Modification of Plant Cell Signalling
TITLE OF INVENTION: and Their Use in the Modification of Plant Cell Signalling
CURRENT APPLICATION NUMBER: US/09/228,986
CURRENT FILING DATE: 1999-01-12
NUMBER OF SEQ ID NOS: 130
SOFTWARE: FastSEQ for Windows Version 3.0
LENGTH: 707
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 QSWKGVSCSGSS--VTLIKLSGLGLSGSLYYQLSDLSSLTTLDLSNNNIQGNIPYALPQK 118

PTM: N-glycosylated.

MISCELLANEOUS: A 36 amino-acid island is present in the 18th
leucine-rich repeat. An island domain has also been found among
the extra-cellular LRRs of the brassinosteroid receptor BRI1 and
has been shown to be critical for its function.

SIMILARITY: Belongs to the Ser/Thr protein kinase family.
SIMILARITY: Contains 21 leucine-rich (LRR) repeats.

05-JUJ-2004 (Rel. 44, Last annotation update)
Phytosulfokine receptor precursor (EC 2.7.1.37) (Phytosulfokine LRR receptor kinase).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -i- FUNCTION: Receptor with a serine/threonine-protein kinase activity. Regulates, in response to phytosulfokine binding, a signaling cascade involved in plant cell differentiation, organogenesis and somatic embryogenesis.

-i- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

-i- SUBCELLULAR LOCATION: Type I membrane protein; plasma membrane
                                                                                                 90; Indels 108;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          229
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor off 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as
                                                                                                                                                                                                                                                                                                                                                           Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              10 MLLVFLGFILOVAGATSWSCHHDDLHALRGLAENLSGKGAVRLRAAW-SGASCCSWEGVG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                         The present sequence is that of AFP1, an antificeeze protein of perennial ryegrass. The encoding cDNA was isolated from a pseudostem cDNA expression library. The invention provides forage grass (perennial ryegrass and tall feecue) antificeaze proteins and the polynucleotides conciding them ADM41458-ADM41483. The polynucleotides were isolated from tissues taken at different times of year (winter and spring) and from different parts of the plants. The polynucleotides can be used to modulate the cold tolerance of an organism, especially plants, mammals, insects, fungi, archaea and bacteria. The method involves incorporating an antifreeze polynucleotide, under the control of a gene promoter sequence, into the genome of the organism, or introducing double-stranded RNA corresponding to the polynucleotide into the cells of the organism, thereby inhibiting expression of an antifreeze protein can be used for the cryopreservation of a cell or tissue, as a food additive of a frozen food product, in a method for decreasing the time required to dehydrate a composition, to treat a disorder characterised by biocrystals associated with disorders such as gout and kidney stones, to preserve the viability of a molecular biology reagent, to destroy unwanted tissue in a patient e.g. tumour tissue, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        183

This sequence is the plant anti-freeze protein of the invention. The anti-freeze protein is characterised in that at least 40% of its amino acids are from the group of serine, threonine and apparagine. The amino acids protein can be used in frozen food products, especially frozen confectionery. Anti-freeze proteins are especially in food products, which are heated, e.g. by pasteurisation, blanching or sterilisation prior to freezing. Plants transformed with a nucleic acid sequence encoding the auti-freeze proteins have an increased frost tolerance. Prior conforts freeze proteins have not been applied to commercially available frood products, due to high costs and complicated processes for obtaining the protein. Also prior art anti-freeze proteins have tended to commercially available confessions provide an ice particle size following an ice recrystallisation this is overcome by the present anti-freeze protein. The anti-freeze protein confining the pasteurisation step. This is overcome by the present anti-freeze protein ingreation indication as and the mixes can be frozen under quiescent conditions, e.g. in a shop or nome freezer without the formation of unacceptable ice crystal shapes and hears.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  150 DEEPNTISGINNSVGSGSNNVVSGNDNTVVSGNNNHVSGSNNTVVTGSDNTVVGSNHVVS 209
